

*Which two actions enable "hide and show" behavior of a data series in a bar chart when its corresponding legend item is clicked?

Setting the Hide and Show Behavior attribute value to No rescaling

Setting the Hide and Show Behavior attribute value to Rescale

Setting the Data Change attribute value to slide to Left

Setting the Hide and Show Behavior attribute value to None

Which two statements are true about creating and customizing Smart Filters pages?

If you create a Smart Filters page based on a table, the filters are auto-discovered using the Data Dictionary Cache.

The search results report can be displayed as an interactive grid.

The search results report can be displayed as an interactive report.

The suggestion chip count is only displayed for filters that support counts, such as LOV-based filter types.

Which two statements are true about Oracle APEX?

Process and data manipulation is not executed in the database.

Setting the Hide and Show Behavior attribute value to No rescaling

Setting the Hide and Show Behavior attribute value to Rescale

If you create a Smart Filters page based on a table, the filters are auto-discovered using the Data Dictionary Cache.

The suggestion chip count is only displayed for filters that support counts, such as LOV-based filter types.

APEX eliminated middle-tier application logic.

Running and APEX app needs client software

Application definition is not stored in the database

You can build interactive reporting apps based on data from disparate systems

Which two Plugin types can be created in Oracle APEX?

Region

Process

Email Template

Validation

*You must create a single master detail page where users can select a row in the master grid to update the detail grids. Users must also interact with the master or the detail without leaving the page. Which type of master detail implementation should you use?

Stacked

Drill Down

Side by Side

*Which statement is true about creating and using a report with form?

Application definition is not stored in the database

You can build interactive reporting apps based on data from disparate systems

Region

Process

Stacked

The Create Application Wizard doesn't support the creation of an interactive report and form combination.

In the Create Application Wizard, you can select a data source (that is, Local Database, REST Enabled SQL Service, or REST Data Source).

Both the Create Application Wizard and Create Page Wizard support the creation of an interactive report or classic report and form combination.

The Create Page Wizard doesn't support the creation of a classic report and form combination.

*Which two tasks can you perform using SQL Workshop?

Load and unload text, DDL, and spreadsheet data.

Install and manage Sample Apps.
Edit an application page.

Track and manage issues in a conversational fashion.

Create join queries using drag and drop.

*You must reference certain data from a dragged event under the Drag and Drop PL/SQL Code attribute of the Calendar component. Examine this list: 1. The ID 2. The NEW_START_DATE 3. The NEW_END_DATE How can these be referenced?

The Create Page Wizard doesn't support the creation of a classic report and form combination.

Load and unload text, DDL, and spreadsheet data.

Create join queries using drag and drop.

#APEX.PK_VALUE#,
#APEX.NEW_START_DATE# and
#APEX.NEW_END_DATE#

:APEXSPK_VALUE,
APEX\$NEW_START_DATE and
:APEX\$NEW_END_DATE

:APEX.PK VALUE,
:APEX.NEW_START_DATE and :
APEX.NEW_END_DATE

#APEX\$PK_VALUE,
#APEX\$NEW_START_DATE# and
#APEX\$NEW_END_DATE#

*Which is a valid Page Process type?

Send E-Mail

Set Value

Execute JavaScript Code

Which two statements are true about creating and managing an APEX Workspace?

A workspace enables multiple users to work within the same Oracle APEX installation.

You can create only two workspaces in an APEX Service (APEX Application Development) instance.

New schemas cannot be created during workspace creation.

A workspace can be associated with only

:APEXSPK_VALUE,
APEX\$NEW_START_DATE and
:APEX\$NEW_END_DATE

Send E-Mail

A workspace enables multiple users to work within the same Oracle APEX installation.

During workspace creation, you can associate the workspace with an existing database schema.

one schema.

During workspace creation, you can associate the workspace with an existing database schema.

*Which statement is true about using SQL Commands?

You can design and prototype data models using a markdown-like shorthand syntax.

You can unload data from the database.

In SQL Commands, you can view queries saved in Query Builder.

You can search and filter database objects.

In your APEX application, you want to have an orderly grid layout of information tiles. Which page type should you choose in the Create Page Wizard?

Interactive Grid

Cards

Unified Task List

Master Detail

*You added Access Control feature pages to your application. Which two actions can you perform as an Administrator using the Administration page?

Add Users

In SQL Commands, you can view queries saved in Query Builder.

Cards

| | |
|---|---|
| Assign roles to users | |
| Create new application roles | Add Users |
| Create Authorization schemes | Assign roles to users |
| <p>*Which two are valid evaluation points for Authorization Schemes?</p> | |
| Never | Once per page view |
| Once per user | Once per session |
| Once per page view | |
| Once per session | |
| <p>*Which two statements are true about loading data from the "Create an Application from a File" wizard?</p> | |
| A sample data set from the sample list can be uploaded. | A sample data set from the sample list can be uploaded. |
| Seed data from a SQL script can be uploaded. | CSV, XLSX, XML, TXT, or JSON files can be uploaded. |
| Data from remote web services can be uploaded. | |
| XML and JSON data can be pasted and loaded. | |
| CSV, XLSX, XML, TXT, or JSON files can be uploaded. | |
| Which two statements are true about the Link Column attribute of an interactive report? | |

It is not possible to exclude Link Column.

If you select Link Column, it is always displayed as the last column in the report.

It is not possible to include a custom target in Link Column.

A Link Column cannot be sorted, hidden, or moved by an end user.

*Which two statements are true about customizing an interactive report by an end user?

Standard Oracle functions cannot be added to columns.

From the Actions menu, multiple charts can be created.

A flashback query can be executed.

Mathematical computations can be added to columns.

Which two statements are true about creating and using an interactive report?

You cannot include Form Page when creating an interactive report page using the Create Page Wizard.

You cannot customize the Search Button Label.

You can specify an Authorization Scheme at the column level.

You cannot restrict users from saving pri-

If you select Link Column, it is always displayed as the last column in the report.

A Link Column cannot be sorted, hidden, or moved by an end user.

From the Actions menu, multiple charts can be created.

Mathematical computations can be added to columns.

You can specify an Authorization Scheme at the column level.

You cannot restrict users from saving private reports by using the Authorization Scheme.

vate reports by using the Authorization Scheme.

*Which statement is true about creating and using a faceted search page?

The Search Results region can be displayed as a Classic Report or Cards.

If you create a faceted search page based on a table, the facets are not auto-discovered.

The Search Results region can be displayed as an interactive report.

If you create a faceted search page on a view or a SQL query, the facets are auto-discovered.

*Which search type in search Configurations provides linguistic and fuzzy search capabilities?

Standard

Oracle Text

Oracle Text

List

Which client credentials are utilized for authentication during the One-Click Remote Application Deployment process?

APEX Developer credentials

Database schema credentials

Database schema credentials

APEX Workspace Admin credentials

Which statement is true about the Data Workshop utility?

You cannot load data from an XLSX file with multiple worksheets.

You can load or unload multiple tables at a time.

The wizards load and unload table data only.

The wizards load and unload all types of schema objects.

*Which two Query Source types can be used to create a dynamic Navigation Bar List?

SQL Query

Procedure

Function Returning SQL Query

Select List

*You must use a Static Content region type to display messages about the employees of the month. Employee names are stored in the P1_ENAME page item. Which text, when placed in Source, will display the message correctly?

Join me in congratulating : P1_ENAME as the new employee of the month!

Join me in congratulating &P1_ENAME. as the new employee of the month!

Join me in congratulating

The wizards load and unload table data only.

SQL Query

Function Returning SQL Query

Join me in congratulating &P1_ENAME. as the new employee of the month!

v('P1_ENAME') as the new employee of the month!

An application includes a report and form on the PRODUCTS table. The form page includes page items P21_PRODUCT_NAME and P21_UNIT_PRICE. P21_UNIT_PRICE is currently displayed below P21_PRODUCT_NAME. Now, you need to reposition the items and display P21 UNIT PRICE next to P21 PRODUCT NAME. Which two statements are true?

In Page Designer, right-click P21_UNIT_PRICE and select Start New Row.

In Page Designer, use the Middle Pane, click P21_UNIT_PRICE and drag the item until it is directly next to P21 PRODUCT NAME.

In Page Designer, select P21_PRODUCT_NAME and then in the Property Editor, under Layout set Start New Row to Yes.

In Page Designer, select P21_UNIT_PRICE and then in the Property Editor, under Layout set Start New Row to Yes.

*Which statement is true about session state management in Oracle APEX?

Multiple number of sessions cannot exist in the database at the same time.

A user cannot run multiple instances of

In Page Designer, use the Middle Pane, click P21_UNIT_PRICE and drag the item until it is directly next to P21 PRODUCT NAME.

In Page Designer, select P21_UNIT_PRICE and then in the Property Editor, under Layout set Start New Row to Yes.

an application simultaneously in different browser programs.

APEX Sessions are logically and physically distinct from Oracle database sessions used to service page requests.

You created a custom theme for an application. Examine these requirements:

1. The theme must be utilized by another application in the same workspace.
2. The master theme may still require changes. Which solution guarantees that any changes to the master theme are reflected in the copied theme?

Subscribing the copied theme to the master theme and refreshing the theme

Refreshing the templates

Copying the changes made in the master theme to the copied theme

Verifying the theme subscription

*You have defined a REST Data Source with ORDS as the REST Data Source Type. This REST Data Source is based on an AutoREST-enabled EMP table on a remote Oracle Database. This REST Data Source is being used as source for an editable interactive grid. When a user updates an employee record in this interactive grid, which operation (HTTP Method) defined in the REST Data Source is utilized to update a record in the EMP table on the remote Oracle Database?

APEX Sessions are logically and physically distinct from Oracle database sessions used to service page requests.

Subscribing the copied theme to the master theme and refreshing the theme

PUT

PUT

GET

POST

Which two statements are true about the usage of a Remote Server in the context of REST Data Sources?

A single REST Data Source can use multiple remote servers.

The remote server should mandatorily be an APEX instance.

Multiple REST Data Sources can reference a single remote server.

The remote server determines the base URL of the REST Data Source.

*You created a shopping cart application and added the "Add to Cart" functionality. You are using an APEX Collection named CART to temporarily store the items In the cart. Which PL/SQL Code snippet can be used to add items (PRODUCT_ID) into this APEX collection when the user adds items to the cart?

Assume: P2_PRODUCT_ID holds the product id of the item being added to the cart.

BEGIN INSERT INTO APEX COLLECTION (id, name, c001) values (1, 'CART' ::P2_PRODUCT_ID); END;

Multiple REST Data Sources can reference a single remote server.

The remote server determines the base URL of the REST Data Source.

BEGIN APEX COLLECTION.ADD_MEMBER (p collection_name => 'CART', P_c001 P2_PRODUCT_ID); END;

BEGIN INSERT INTO CART (id, c001)
values (1, P2_PRODUCT_ID); END;

BEGIN APEX_COLLECTION.ADD_MEMBER (p_collection_name => 'CART', P_c001
P2_PRODUCT_ID); END;

Which two statements are true about the APEX_MAIL API?

You can send emails using the APEX_MAIL package from an Oracle APEX application.

The APEX_MAIL package supports sending emails only to Oracle database users.

You can add files as attachments to your emails using the APEX_MAIL package.

You can receive emails using the APEX_MAIL package in an Oracle APEX application.

*There is a page with an interactive grid region based on this statement: SELECT EMPNO, ENAME, COMM from EMP; In the Interactive Grid attributes, under the Edit group, the Enabled switch is turned off. Which are two of the actions that you must perform to make an employee's commission editable in the grid?

Set EMPNO, ENAME to "Display Only".

Ensure that the "Primary Key" switch is turned "On" for the EMPNO column.

You can send emails using the APEX_MAIL package from an Oracle APEX application.

You can add files as attachments to your emails using the APEX_MAIL package.

Ensure that the "Primary Key" switch is turned "On" for the EMPNO column.

In the Interactive Grid attributes, turn "On" the Enabled switch, under the Edit group.

In the Interactive Grid attributes, turn "On" the Enabled switch, under the Edit group.

In the Interactive Grid attributes, select COMM for "Allowed Row Operations Column".

Which two approaches can be used to create custom stored procedures in SQL Workshop?

Using Object Browser

Using Quick SQL

Using SQL scripts

Using Data Workshop

*An application includes a form on the EMPLOYEES table. You must limit the p5 MANAGER page item so users can select a single employee name EMP_NAME and save the corresponding employee ID EMP_ID to the database. Examine this statement used for the List of Values definition: SELECT emp_name d, emp_id r from employees ORDER BY 1; Which item type can be used to display P5_MANAGER?

Popup LOV

Switch

Check box

*There is a validation of type Item is numeric on the P1 SALARY item. When the

Using Object Browser

Using SQL scripts

Popup LOV

page is submitted, this error message is displayed both in the notification and below the item:

What will cause the validation error to appear only in the Notification area?

Setting Display Location to Inline in Notification

Setting the Value Required to Yes on P1_SALARY

Removing P1_SALARY from the validation Associated Item

Which is a valid method of logging messages to the execution log in APEX automation?

```
apex_error.add_error( p_message =>
'SAL for'||:ENAME|| increased by 1%.
', p_display_location=> apex_error.c_inline_in_notification);
```

```
apex_automation.log_info('SAL for ||
:ENAME || increased by 1%.'');
```

```
apex_debug.info ('SAL for'||:ENAME|| in-
creased by 1%.'');
```

The Movies faceted search report is filtered only when the Apply button for a selected facet is clicked. What must be done in the Page Designer so that report filtering is automatically executed when any facet value changes?

Navigate to the faceted search region Attributes, and turn off the show Facet

Setting Display Location to Inline in Notification

```
apex_automation.log_info('SAL for ||
:ENAME || increased by 1%.'');
```

Name attribute. Then, navigate to each facet and in the Property Editor, turn on client-Side Filtering.

Navigate to the faceted search region Attributes, and turn off the show Facet Name attribute.

Navigate to the faceted search region Attributes, and disable the Batch Facet Changes attribute.

Navigate to each facet and then in the Property Editor, turn on client-Side Filtering.

*Which two statements are true about a Progressive Web Application (PWA)?

You can create a PWA only when creating a new application with the Create Application Wizard.

Enabling the PWA functionality optimizes page loading speed on a mobile device.

PWA features will be rendered even if the application is served in an unsecured environment.

To use the PWA feature, the Friendly URLs attribute in the Application Definition, Properties section must be turned off.

Enabling the PWA functionality in your APEX app adds a new navigation bar entry named Install App to your app.

Navigate to the faceted search region Attributes, and turn off the show Facet Name attribute. Then, navigate to each facet and in the Property Editor, turn on client-Side Filtering.

Enabling the PWA functionality optimizes page loading speed on a mobile device.

Enabling the PWA functionality in your APEX app adds a new navigation bar entry named Install App to your app.

In a faceted search page, facets can be displayed as different UI types. Which two facet item types are supported in the faceted search region?

Date Picker

Checkbox Group

Checkbox Group

Range

Popup LOV

Range

Which two statements are true about Faceted Search pages?

Multiple charts are not visible in the same region.

Multiple charts are not visible in the same region.

Faceted Search supports the ability to filter columns storing multiple values as one string.

Facets map to specific database columns.

Facets map to specific database columns.

A facet's chart can be seen only in a nonmodal dialog.

Which three are the main components of APEX workspace homepage?

RESTful Services

App Builder

App Builder

Gallery

Gallery

SQL Workshop

SQL Workshop

Which two are true about Oracle APEX?

Requires no additional client software.
A web browser is the app development IDE.

Performs the data processing in a middle-tier server

Requires developers to be proficient in Java, Python and other programming languages.

Is declarative. It requires no code generation.

You can create an APEX workspace and build APEX apps on which of the following platforms?

Oracle Autonomous Cloud

Oracle XE

Amazon RDS

Microsoft Azure

All of the above

Requires no additional client software.
A web browser is the app development IDE.

Is declarative. It requires no code generation.

All of the above

Scalable

Provide Rich Functionality with Less Code

Which two among the following are TRUE about Low Code Apps?

Not Mobile Friendly

Scalable

Expensive

Provide Rich Functionality with Less Code

What three are the result of the following QuickSQL shorthand notation do?

departments /insert 4 name /nn location
country

Creates an id column as a primary key

Inserts 4 rows of random data into the departments table

Create the departments table with 4 columns

Create the departments table with 3 columns

Which component in SQL Workshop allows you to build queries graphically without manual SQL coding?

Data Workshop

Query Builder

SQL commands

Quick SQL

Creates an id column as a primary key

Inserts 4 rows of random data into the departments table

Create the departments table with 4 columns

Query Builder

From SQL Workshop, you can perform which two of the following actions?

Run SQL commands and scripts

Create and view database objects

Create an APEX user

Run SQL commands and scripts

Create and view database objects

Delete database

Using Data Workshop, you can perform which three tasks:

Load vast amount of data into the database

Export vast amount of data from the database into a file

Load data using various file formats such as XLSX, CSV, XML, and JSON

Load vast amount of data into the database

Export vast amount of data from the database into a file

Load data using various file formats such as XLSX, CSV, XML, and JSON

Delete data from the database

You use the Create Page Wizard to create a faceted search page on the EMP table. What is the default report type generated for this page?

Interactive Grid

Classic Report

Column Toggle Report

Interactive Report

You require a Page Computation to execute before the page is rendered. Which two computation points (Execution Point) will do this?

Before Header

After Submit

After Header

After Page Processing

Before Header

After Header

Which statement is true about creating and using pages in an APEX application?

A user cannot interact with a nonmodal dialog and content on the page.

You can copy a page only from the current application.

Modal and nonmodal dialog pages are supported only if the current application theme contains at least one page template of type Dialog Page.

*Which two layout options are available for Page Designer under Utilities?

Four Pane Mode

Single Pane Mode

Three Pane Mode

Two Pane Mode

Which authentication scheme type supports authentication with social networks and enterprise identity providers that support OpenID Connect or OAuth2 standards?

Social Sign-In

Open Door Credentials

SAML Sign-In

Modal and nonmodal dialog pages are supported only if the current application theme contains at least one page template of type Dialog Page.

Three Pane Mode

Two Pane Mode

Social Sign-In

HTTP Header Variable

Which two are prerequisites to use the REST-enabled SQL feature in Oracle APEX?

On the remote Oracle Database, install ORDS 19.x or later.

REST enable the schema in the remote Oracle Database using ORDS.ENABLE_SCHEMA.

Install Oracle APEX in the remote Oracle Database.

Create a database link to the remote Oracle Database in the local APEX Schema.

Which two statements are true about REST Data Source Synchronization?

You cannot trigger Data Synchronization on a regular schedule using a scheduler job.

If the local table is not in sync with the Data Profile, Data Synchronization continues to work for columns present in both the table and the Data Profile.

If the local table is not in sync with the Data Profile, Data Synchronization doesn't work.

The local table can only be used for Data Synchronization but you cannot add indexes or change physical properties.

On the remote Oracle Database, install ORDS 19.x or later.

REST enable the schema in the remote Oracle Database using ORDS.ENABLE_SCHEMA.

If the local table is not in sync with the Data Profile, Data Synchronization continues to work for columns present in both the table and the Data Profile.

To execute REST source synchronizations on schedule, the CREATE JOB privilege must be granted to the application's parsing schema.

To execute REST source synchronizations on schedule, the CREATE JOB privilege must be granted to the application's parsing schema.

Which statement is true about Unified Task List in the Approvals component?

It is a page type in the Create Page Wizard that is used to create a summary of tasks that functions like an inbox.

It is a page that shows details for a specific task, which can include metadata, history, comments, and actions.

It is a shared component used to configure task parameters, participants, actions, and due dates.

Which two statements are true about the Create Application Wizard?
(Look at phone for Picture)

It allows the uploading of JavaScript or CSS files required for an application.

It allows application pages to be added or deleted.

It allows application pages to be reordered.

It allows the application authorization to be changed.

Which two statements are true about creating and using dynamic actions?

If no client-side condition is defined, true

It is a page type in the Create Page Wizard that is used to create a summary of tasks that functions like an inbox.

It allows application pages to be added or deleted.

It allows the application authorization to be changed.

actions will not fire.

You can execute JavaScript code by creating a dynamic action.

Once you create a dynamic action, you cannot add additional true actions.

If a client-side condition is defined, the true action will fire when the condition is met, and the false action will fire when it is not.

Now you must extend the functionality of this form so that:
(Look at Phone for Picture)

- If you select 'SALESMAN' from the select list for Job page item (P2_JOB), both the 'Hire date' (P2_HIREDATE) and 'Commission' (P2_COMM) page items and their associated labels are displayed
- If you select any other value from the select list for Job page item (P2_JOB), both the 'Hire date' (P2_HIREDATE) and 'Commission' (P2_COMM) page items and their associated labels are hidden

Which two steps must be performed?

Create a dynamic action on P2_JOB, P2_HIREDATE, and P2_COMM.

Create a dynamic action on form load.

Specify a client-side condition of type Item = Value and enter SALESMAN for Value.

You can execute JavaScript code by creating a dynamic action.

If a client-side condition is defined, the true action will fire when the condition is met, and the false action will fire when it is not.

Specify a client-side condition of type Item = Value and enter SALESMAN for Value.

Create a dynamic action on P2_JOB.

Create a dynamic action on P2_JOB.

Create a dynamic action on P2_HIRE-
DATE and P2_COMM.

Which is NOT a valid Geometry Column
Data Type available for maps region?

Latitude/Longitude

SDO GEOMETRY

JSON_OBJECT

GeoJSON

JSON_OBJECT

Examine this code used in Quick SQL:
students name roll no num Quick SQL
is using default settings. Which table cre-
ation script or other output is produced?

```
create table students ( id number gen-  
erated by default on null as identity  
constraint students_id_pk primary key,  
name varchar2 (255 char) not null, roll no  
number ) ;

Smart Filters

Interactive Grid

You have an interactive grid component and you are enabling the Save Public Report attribute. As what can end users save the report type?

As Private and Public only

As Private only

As Public only

As Primary only

As Private only

In your existing Employee Benefits application, you want to determine the most active users, the most used pages, and the performance of pages to better understand how your application is being utilized and areas for improvement. How can this be achieved?

On the Application Home page, click Create Page. In the Create Page Wizard, select the Activity Reporting feature type.

On the Application Home page, click Create Page. In the Create Page Wizard, select the Master Detail page type.

On the Application Home page, from the Tasks list, click the Add Feature Page button. Then select the feedback feature type.

On the Application Home page, click Create Page. In the Create Page Wizard, select the Email Reporting feature type.

Which two actions can you perform using the Object Browser?

Browse database objects of the current schema.

Export and import SQL scripts.

Restore dropped database objects.

Create and run SQL scripts.

On the Application Home page, click Create Page. In the Create Page Wizard, select the Activity Reporting feature type.

Browse database objects of the current schema.

Create and run SQL scripts.

Create a lookup table based on a column in the current table

Which two functions can be used by an end user when pivoting an interactive report?

Rank

Minimum

List aggregate

Median

List aggregate

Minimum

Median

Which statement is true about creating and using an interactive grid?

End users cannot rearrange columns by dragging and dropping.

For both editable and noneditable interactive grids, end users can change the report layout and create private reports.

An interactive grid supports Pivot View and Group By View features

Which two tasks can you perform using App Builder?

Create and manage apps.

For both editable and noneditable interactive grids, end users can change the report layout and create private reports.

Create and manage database objects.

Generate data definition language (DDL) statements from the Oracle data dictionary.

Create and manage database objects.

Import previously exported apps.

Import previously exported apps.

Create join queries using drag and drop.

You must generate a SQL insert statement for the DEPT table in Quick SQL. Which two statements will do that?

dept name /insert 1

dept/insert 1 name

dept /insert name

dept /insert 1 name

dept/insert 1 name

dept /insert 1 name

An application was created using the Create Application Wizard which enabled the Access Control feature. Which two components are created when enabling the Access Control feature?

The configuration page to set access level of authenticated users

The configuration page to set roles of workspace users

The configuration page to enable end users to select various theme styles

The administrative page region with links to Access Control feature

The configuration page to set roles of workspace users

The administrative page region with links to Access Control feature

The configuration page to enable Administrators to select default theme.

*Which two feature pages can you create using the Create Page Wizard?

Unified Task List

Feedback

Access Control

Search Page

Examine this code entered in Quick SQL:

emp_salary name vc255 salary num

commission yn/check TRUE, FALSE

Which statement is true about the commission yn column?

It will default to FALSE.

It will default to TRUE.

It will restrict acceptable values to Y or N.

It will restrict acceptable values to TRUE or FALSE

Which two tasks can you perform by using Page Designer?

Copy an application

Modify a button

Create an application

Import an application

Add a new region or an item

Which two report types can you create by using the Create Page Wizard?

REST Data Sources

Faceted Search

Feedback

Access Control

It will restrict acceptable values to TRUE or FALSE

Modify a button

Add a new region or an item

Which statement is true about reports in Oracle APEX?

An interactive report allows end users to customize the report layout and data displayed by selecting options on the Actions menu

A classic report page includes the customization capabilities available in interactive reports, as well as the ability to rearrange the report interactively using the mouse and keyboard

You can create a report only by using Create Application Wizard, not by using Create Page Wizard

An interactive page features colorful blocks, which resemble index cards, laid out on a page.

Which is NOT a Preconfigured Authentication Scheme?

Database Accounts

Application Express Accounts

Closed Door Credential

No Authentication

Smart Filters

An interactive report allows end users to customize the report layout and data displayed by selecting options on the Actions menu

Closed Door Credential

Which two self-service tools are available with Autonomous Database?

Encryption only in Object Storage

Oracle Machine Learning

Business Objects

Low Code App Dev, APEX

Oracle Machine Learning

Low Code App Dev, APEX

Which statement is true about creating and using forms in an APEX application?

A Stacked Master Detail is a single page master-detail utilizing side-by-side layout and report regions with modal edit windows

You can create a form only by using the Create Page Wizard. You can create a form in Page Designer

The Master Detail form enables users to insert, update, delete values from two tables or views

The Master Detail form enables users to insert, update, delete values from two tables or views

You can create a form only by using the Create Application Wizard. You cannot create a form in Page Designer

Which pane in Page Designer allows the editing of a component's properties?

Toolbar

Right pane

Right pane

Central pane

Left pane

Which is a standard for exchanging authentication and authorization information between different security domains, to provide cross-organization single sign-on?

Open ID

Security Assertion Markup Language

Sign-on System

Virtual Private Database (VPD)

Which statement is true about implementing security in your APEX application?

Authentication refers to restricting access to specific pages and components in your application based on your privileges

Once created, you cannot change the authentication scheme associated with an application

Confirming a user's identity before allowing access to the application is known as authorization

You can apply an authorization scheme to an entire application or its components

Which two spatial geometry objects are supported on a Map page in your APEX application?

Security Assertion Markup Language

You can apply an authorization scheme to an entire application or its components

Range

Box Plot

Radar
Lines

Points

Which statement is true about page components?

Pages require one of each component

Pages contain user interface elements

Items can be regions on a page

Regions contain pages and items

In a Master-Detail form, what do you need to specify to link the Detail to the Master?

Master Block

Master Table

Master Form Process

Master Region

Which statement is true about provisioning an APEX workspace?

An APEX workspace is a shared work area where multiple developers can build applications

You can create only one workspace in an APEX instance

Radar
Lines

Points

Pages contain user interface elements

Master Region

An APEX workspace is a shared work area where multiple developers can build applications

A workspace is not associated with any schema

You cannot associate an existing database schema with your workspace

Which two tasks can you perform using Quick SQL?

Export an application

Compare schemas

Quickly develop a script for sample tables and views

Import an application

Easily generate random data

Which two types of pages can you create by using the Create Page Wizard?

Blank Page

Interactive Grid

Shared components

Utilities

Team Development

Which statement is true about a Progressive Web Application (PWA)?

To make an existing app a PWA, you must verify that the Friendly URLs attribute is off in the Application Definition, Properties section

Compare schemas

Quickly develop a script for sample tables and views

Blank Page

Interactive Grid

PWA features will be rendered even in an unsecured environment

Enabling PWA functionality in your APEX app adds a new navigation bar entry named Install App to your application

You can only create a PWA when creating a new app. You cannot make an existing app a PWA

Which two types of calendars are supported by App Builder?

Calendar

Global Calendar

Regional Calendar

Legacy Calendar

What you can export by using the Export/Import utility?

All the options

Application

Uploaded cascading stylesheets

Uploaded images

Which statement is true about exporting and importing your APEX application?

You can export APEX application as zip file

Using the Export Application Wizard, you

Enabling PWA functionality in your APEX app adds a new navigation bar entry named Install App to your application

Calendar

Legacy Calendar

All the options

can only export the application but not the supporting object definitions

Your application is saved as .txt file

You can export an APEX application from an instance running APEX 22.1 and import into APEX 21.1 version

Which statement is true about creating and using a calendar in an APEX application?

You can create a calendar only by using the Create Page Wizard, not as a region on an existing page

Calendars in APEX are based on a table or SQL query you provide

You can create a calendar only by using the Create Application Wizard, not by using the Create Page Wizard

The data source for your calendar can only be a local database, not an external datasource

Which two approaches can be used to create custom stored procedures in SQL Workshop?
Quick SQL

Data Workshop

Standalone SQL commands

Procedure Builder

SQL scripts

You can export APEX application as zip file

Calendars in APEX are based on a table or SQL query you provide

Standalone SQL commands

SQL scripts

Which two statements are true about low code application development with Oracle APEX?

Application Development IDE is web browser

Data processing is not done in the database

Apps cannot natively access Oracle Database capabilities

The application definition is not stored in the database

Using APEX, you can build mission-critical enterprise apps

Which statements are true about creating applications using Oracle APEX?

When creating an application from a file, you can only load data into a new table but not to an existing table.

Using the Create Application Wizard, you can only create an application from file

Oracle APEX application pages share a common session state and authentication

Once an application is created, you cannot create additional pages

Using the Create Application Wizard, you can only create an application based on existing tables

Application Development IDE is web browser

Using APEX, you can build mission-critical enterprise apps

Oracle APEX application pages share a common session state and authentication

Once an application is created, you cannot create additional pages

Which two form types can you create in an APEX application?

Editable Interactive Grid

Rest Data Source

Quick Edit

Master Detail

Smart Filters

By default, which interactive grid report type can be created by an end user?

Public report

Alternative report

Primary report

Private report

Which two are features of the Data Load utility in Data Workshop?

Omit (skip) records when loading based on a function

Load XML, JSON, XLSX files, or delimited-field text files

Omit (skip) columns when data loading

Load data into multiple tables at once

Create an application from the data loaded

Editable Interactive Grid

Omit (skip) columns when data loading

Which two tools are included in SQL Workshop?

Object Browser

Gallery

SQL Scripts

Team Development

Milestones

In which two cases, can you use classic reports?

To provide basic sort and search options

To provide optimal reports on smart phones

To provide options to save your customization within the application

To provide the customization option

To provide the download option

Which two processes takes place when the APEX engine runs Accept Page?

Save submitted values

Computations and validations

Navigation to different pages

Show page

Which statements are true about session state?

Object Browser

SQL Scripts

To provide basic sort and search options

To provide the download option

Save submitted values

Computations and validations

Sessions are same as the database sessions

Sessions are completely independent of each other

Sessions are limited and can only be on single instance.

Each session has a single identifier

Which Two statements are true about using Oracle APEX Application Development (APEX Service)?

There is a limit on the number of applications that can be developed

There is a limit on the number of end users using your apps

There is a limit on the number of developers using your service

It includes Oracle REST Data Services (ORDS)

It includes Oracle Database Actions (SQL Developer Web)

Which two preconfigured authentication schemes are supported by Oracle APEX?

Reader Rights

Social Sign-in

Database Accounts

Sessions are completely independent of each other

Each session has a single identifier

It includes Oracle REST Data Services (ORDS)

It includes Oracle Database Actions (SQL Developer Web)

Social Sign-in

Database Accounts

Administration Rights

Contribution Rights

Jenny has a form page based on ORDER_ITEMS. For certain product types, she needs to redirect to a modal dialog page to ask for additional information, before validating or processing the record on page submission. Which processing point should Jenny select for the branch?

After Submit

After Processing

After Submit

Processing

Before Computations

The Page Designer Toolbar allows you to perform which two of the following actions?

Create a new page

Create a new page

Navigate to Shared Components

Export the application

Delete the application

Navigate to Shared Components

Choose the three different ways in which you can add a checkbox to a page.

Use the context sensitive menu in the Gallery pane.

Use the context sensitive menu in the Gallery pane.

Right click Body in the Rendering Tree and add a New Page Item as Checkbox Type.

Right click Body in the Rendering Tree and add a New Page Item as Checkbox Type.

Add a checkbox from the Property Editor

Drag and drop the checkbox item into the Layout pane

When a button is pressed, an overlay window is positioned within the viewport.
What kind of page mode is it?

Modal Dialog

Non-Modal Dialog

Normal Page

Help Page

Choose from the following the different kinds of page components you can create in APEX.

All of them

Faceted Search

Search Page

Interactive Grid

Smart Filters

Which two types of pages behave similarly in functionality?

Map

Smart Filter

Faceted Search

Cards

Drag and drop the checkbox item into the Layout pane

Modal Dialog

All of them

Smart Filter

Faceted Search

Which two of the following capabilities are TRUE for both Interactive Report and Interactive Grid?

End user can customize how and what data is displayed.

End user can add, modify, and refresh data directly on the report.

End user can save the report

End user can rearrange the report interactively using the mouse.

In a Classic Report, an end user can perform which one of the following actions?

Create Control Breaks in the report.

Filter values of a column in the report.

Sort the columns of the report.

Rearrange the columns in the report.

You can create a report in which of the three following methods?

Create a report as a new page in an application

Create a report from Object Browser

Create a report region on a page in an application

Create a report when you create a new database application

End user can customize how and what data is displayed.

End user can save the report

Sort the columns of the report.

Create a report as a new page in an application

Create a report region on a page in an application

Create a report when you create a new database application

I want to hide a few columns in my interactive report. To do so, which option should I choose from the Actions menu?

Columns

Data

Filter

Format

Choose the two statements that are TRUE about an Interactive Report. As a developer:

You can customize the pagination

You can modify the data in the report after running the app

You can customize the Actions menu to include or exclude certain options.

You cannot modify the report source query

Choose the two options provided in a Column Heading menu of an Interactive Report.

Group By

Hide

Control Break

Delete

To highlight certain rows in the interactive report based on a condition, you

Columns

You can customize the pagination

You can customize the Actions menu to include or exclude certain options.

Hide

Control Break

must:

Choose a condition in Format > Highlight

Provide a conditional SQL query

Edit the rows in the report and select a color

Rows cannot be highlighted in an Interactive report

Which two of the following types can an end user save the customized Interactive report as?

Cannot save the report

Default report

A Public report

A private report

Choose the three types of aggregations you can apply on a column.

Standard Deviation

Count

Sum

Average

When a table or a SQL query returns many rows, an Interactive Grid is best displayed to the user with pagination. The two types of pagination available are:

Choose a condition in Format > Highlight

A Public report

A private report

Count

Sum

Average

Scroll

Page

No Pagination

Page and Scroll

Which three of the following statements are TRUE about saved Public Interactive Grids?

Public reports are available to all users

To enable an end user to save a public interactive grid, the user must have the required permission

Any user may save public interactive grids

Only the user who creates a public interactive grid can save, rename, or delete it

Which two are true when the Edit option is NOT enabled for an Interactive Grid?

The end user cannot create charts

The end user can customize the report

The end user cannot edit the underlying data in the database

The end user can edit the underlying data in the database

Which two statements that are TRUE about charts in Interactive grid?

Scroll

Page

Public reports are available to all users

To enable an end user to save a public interactive grid, the user must have the required permission

Only the user who creates a public interactive grid can save, rename, or delete it

The end user can customize the report

The end user cannot edit the underlying data in the database

Once a chart is created, you can switch the view between Grid and Chart view.

To remove a chart, click the Remove Chart icon (X) adjacent to the chart filter

You can create multiple charts at a time in an interactive grid

Once the chart is created, it cannot be reconfigured.

What are the three types of List of Values(LOV) you can create on a page?

Static LOV

Dynamic LOV

Popup LOV

Cascading LOV

Let's say that there are two select lists on a page. Making a selection in the DEPARTMENT select list, determines which individuals display in the Employees select list. This type of LOV is called:

Cascading LOV

Static LOV

Dynamic LOV

Popup LOV

Choose the three types of page items that can be placed on a page.

Global variable

Once a chart is created, you can switch the view between Grid and Chart view.

To remove a chart, click the Remove Chart icon (X) adjacent to the chart filter

Static LOV

Dynamic LOV

Cascading LOV

Cascading LOV

Select List

Checkbox

Select List

Checkbox

Date Picker

Date Picker

Choose from the below options the actions that can be performed when a button is clicked.

Redirect to a page in the same application

Redirect to a page in a different application

All of them

Redirect to a URL

All of them

Submit Page

Consider a customers report. A customer name is clicked in the report to display the Customer Details form. When the items in the form dialog are updated and the user clicks Apply Changes, the page process is executed and the items from the page are used to update and commit the underlying table in the Oracle Database. What are the two types of events that occurred in this scenario?

Page Processing

Page Rendering

Page Processing

Page Validation

Page Rendering

Page Refresh

A Page Computation can be created from which two of the following tabs?

Dynamic Actions

Processing

Shared Components

Rendering Tree

Processing

Rendering Tree

When you click a Customer Name in the Customers report, the Customer Details form dialog page is displayed. What are the events that occur in this scenario?

Page Rendering

Page compilation

Page rendering and processing

Page Processing

Page Rendering

When you run an application, the APEX engine relies on which two processes?

Accept page

Show Page

Validate Page

Run Page

Accept page

Show Page

When you create a Dynamic Action, you specify the event that causes the dynamic action to fire. Choose the categories these events are classified into.

All of them

Browser Events

Component Events

All of them

Custom Events

Framework Events

To create a Dynamic Action, you need to specify which three of the following options?

Why the action is performed

What elements are affected by the action

What action or actions are performed

When the action occurs

In an Employee form, the 'Commission' and 'Hire Date' fields are enabled only if the Job is 'Salesman'. This can be achieved by which feature of APEX?

Conditional SQL

PL/SQL procedure

Dynamic Actions

Processing

Which two statements are TRUE about Dynamic Actions?

It is not possible to debug Dynamic Actions from the Developer Toolbar

Dynamic Actions require complex client

What elements are affected by the action

What action or actions are performed

When the action occurs

Dynamic Actions

More dynamic actions you add to a page, the greater your overall page size.

side Javascript code.

More dynamic actions you add to a page, the greater your overall page size.

Dynamic actions provide a way to define complex client-side behaviour declaratively without the need for JavaScript.

Which three of the following statements are TRUE about Faceted Search?

You can create only 5 facets per page

The right side of the page features a Search Results region, which can display as a classic report or a cards report.

After the end user changes a facet, the results, dependent facets, and occurrence counts refresh immediately.

The facets are displayed on the left and upper part of the screen

Select the three types of Facets you can create in APEX.

Range

Text Area

Checkbox Group

Input Field

Select the three types of Card Layout you can create in APEX.

Grid
Horizontal(Row)

One or more Search Configurations can be configured in a Search Page. (

One or more Search Configurations can be configured in a Search Page.

Generally, clicking on the hamburger menu in the upper-left corner of an APEX application displays a list of pages. What is this navigation called?

Navigation Menu

Lists

Navigation Bar List

Breadcrumbs

Navigation Menu

Select the two places from where you can access the Shared Components Page?

Application homepage

Gallery

Page Designer

SQL Workshop

Application homepage

Page Designer

Which three statements are TRUE about Shared Components?

Shared components are common elements that can be displayed or applied on any page within an application

Once you create a Shared Component, you can add them to any page within your APEX application

Once you create a Shared Component, you can add them to any page within an APEX application in any workspace.

Breadcrumbs, Lists, and Navigation Bar entries are examples of shared components

Shared components are common elements that can be displayed or applied on any page within an application

Once you create a Shared Component, you can add them to any page within your APEX application

Breadcrumbs, Lists, and Navigation Bar entries are examples of shared components

Choose the statement that is TRUE about Universal Theme.

Universal theme is the default theme that is shipped with Oracle APEX

Features a responsive design and enables developers to create web applications without extensive knowledge of HTML, CSS, or JavaScript

All of them

All of them

Uses a 12-column grid layout system for arranging components on a page.

Ships with a variety of pre-built theme styles.

Which of the following options in the Developer Toolbar enables you to customize the look and feel of the application?

Debug
Customize
Quick Edit
Session

Customize

Developers can use Template Options in which of the following ways?

Rendering buttons in different styles, with and without icons

Applying different colors or accents

All of them

All of them

Displaying form fields with different alignments

Applying different spacing and padding

What are the three key features of Universal Theme?

Responsive Design
Versatile UI Components
Easy Customization
Support for single theme

Responsive Design
Versatile UI Components
Easy Customization

What are Task definitions that exist on the application level in the Shared Components section made up of ?

Task Settings
Parameters
Participants
All of them
Actions

All of them

What three are the building blocks of Approvals Component?

Task Details Page
Automations
Task Definition
Unified Task List

Task Details Page
Task Definition
Unified Task List

Which three of the following are use cases of Automations?

Approving specific requests

Approving specific requests

Deleting a database record based on an end user's request

Deleting a database record based on an end user's request

Monitoring log tables and raising an alert when there is an issue

Sending email alerts at a particular time of the week

Sending email alerts at a particular time of the week

Plug-ins can be used declaratively in which of the following components in APEX?

- Dynamic Actions
- All of them
- Regions
- Items
- Process Type

All of them

What three are the uses of Collections in APEX?

Collections enable you to store rows and columns in the current session into database tables

You insert, update, and delete collection information using PL/SQL API APEX_COLLECTION.

Use collections to temporarily capture one or more nonscalar Values.

Collections can be accessed, manipulated, or processed during a user's specific session.

You insert, update, and delete collection information using PL/SQL API APEX_COLLECTION.

Use collections to temporarily capture one or more nonscalar Values.

Collections can be accessed, manipulated, or processed during a user's specific session.

Which three of the following statements are TRUE about Data Synchronization?

Data Synchronization enables developers to automatically sync the contents of a local table with the data from a REST service.

You must trigger Data Synchronization manually

APEX can create the local table based

Data Synchronization enables developers to automatically sync the contents of a local table with the data from a REST service.

APEX can create the local table based on the visible columns in the REST Data Source Data Profile.

1Z0-770-23 Practice Test

Study online at https://quizlet.com/_diklc

on the visible columns in the REST Data Source Data Profile.

Helps in Providing efficient reporting on large data sets coming from a REST service

What three are the key features of Data Load Definition?

The APEX_DATA_LOADING PL/SQL API is available for custom processing.

Only XML data format can be loaded to tables or collections

Easy workflow for end users: upload the file, verify the preview, and load data

Column mapping occurs at design time, removing the burden on end users.

Choose the three requirements for creating a REST Enabled SQL Reference.

Set up any remote database

Configure and enable the REST Enabled SQL service feature

Activate REST Enabled SQL for the target schema on the remote database

Install Oracle REST Data Services (ORDS) 19.x or later.

Oracle APEX provides direct integration of REST Data Sources in which of the following components?

Interactive Reports

Helps in Providing efficient reporting on large data sets coming from a REST service

The APEX_DATA_LOADING PL/SQL API is available for custom processing.

Easy workflow for end users: upload the file, verify the preview, and load data

Column mapping occurs at design time, removing the burden on end users.

Configure and enable the REST Enabled SQL service feature

Activate REST Enabled SQL for the target schema on the remote database

Install Oracle REST Data Services (ORDS) 19.x or later.

Which of the following are preconfigured authentication schemes?

- All of them
- Open Door Credentials
- Social Sign In
- HTTP Header Variables
- LDAP Directory

All of them

When you create an Access Control Page, which three of the following Access Roles get created?

- Administrator
- Reader
- Developer
- Contributor

Administrator
Reader
Contributor

The APEX engine uses which component as a key for tracking each user's session state?

- APP_USER
- APEX_USER
- HTTP_USER
- LDAP_USER

APP_USER

In APEX, you can choose which three of the following Authentication methods?

- Custom Authentication Scheme
- Built-in Authentication Scheme
- Authorization Scheme
- No Authentication

Custom Authentication Scheme

Built-in Authentication Scheme

No Authentication

You can apply an authorization scheme for which three of the following components?

A page

A session
A page
An entire application
Specific control such as region,item or button

Choose the three correct statements about Charts in APEX.

Each Oracle JET visualization supports animation, accessibility, responsive layout, internationalization, test automation, and a range of inter activity features.

You can create charts without using Oracle JET

Oracle APEX supports charts based on the Oracle JavaScript Extension Toolkit (Oracle JET) Data Visualizations.

You can visualize data as bar, line, area, range, combination, scatter, bubble, polar, radar, pie, donut, funnel, and more

Choose the three supported spatial geometry objects in Maps.

Bars
Heat map
Polygons
Points

What are the required fields while creating a Chart in APEX?

Label Column
Name
All of them
Data Source
Value Column

An entire application

All of them

What are the three features of a calendar in APEX?

Next - Navigates to the next month.

Month, Week, Day - Displays a monthly, weekly and daily view.

Reminders - Displays the reminders set by the users

Previous - Navigates to the previous month.

While migrating apps, once the database objects are created in the target environment, you can load the data using which of the components?

Data Workshop

Data Generator

Quick SQL

App Builder

What are the two primary ways to move database objects and data from one environment to another, for a single application?

SQL Workshop

Oracle SQL Developer

App Builder

Page Designer

What three components must be considered while migrating an APEX app between environments?

Move the database objects

Move the images

Next - Navigates to the next month.

Month, Week, Day - Displays a monthly, weekly and daily view.

Previous - Navigates to the previous month.

Data Workshop

SQL Workshop

Oracle SQL Developer

Move the database objects

Move the images

Move the application definition and all associated files

Move the sessions data

Select the two advantages of using One-click Remote Deployment.

Directly deploy your app definition along with the objects from the source system to the target system

Simplify the process of deploying an application

Deploy the app, and explicitly install the supporting objects in one-click.

You need to access your production environment to import the app directly.

Which statement is true about using the App Gallery?

You cannot install Sample Apps and Starter Apps directly from the Gallery.

You can download Sample Apps and Starter Apps from Team Development to import into your workspace.

Custom Apps are only available if your instance administrator has enabled them.

Sample Apps and Starter Apps are only available if your instance

Which two statements are true about Maps in Oracle APEX?

Move the application definition and all associated files

Directly deploy your app definition along with the objects from the source system to the target system

Simplify the process of deploying an application

Custom Apps are only available if your instance administrator has enabled them.

Maps support REST-Enabled SQL

Background maps do not require any API keys

Maps don't support REST Data Sources.

Heat Map and Polygons are not supported Spatial geometry objects

Which three statements are true about Theme Styles?

Developers can edit a Theme Style from the Create Page wizard

Developers can edit a Theme Style from the Themes page

A theme can have multiple theme styles set as active.

You can enable users to select a theme style in a running application

Theme Roller enables you to quickly change the theme style

You want to enable anyone to access your application using a built-in login page that captures a user name. Which authentication scheme would you choose?

Custom Authentication

No Authentication

Social Sign-In

Open Door Credentials

In Quick SQL, you entered this short-hand syntax:

Maps support REST-Enabled SQL

Background maps do not require any API keys

Heat Map and Polygons are not supported Spatial geometry objects

Developers can edit a Theme Style from the Themes page

You can enable users to select a theme style in a running application

Theme Roller enables you to quickly change the theme style

Open Door Credentials

departments /insert 10 name location
vc255 employees /insert 20 name email
hiredate

Which two statements are true about the generated SQL?

DEPARTMENTS and EMPLOYEES tables will have a primary key in each and a foreign key relationship linking EMPLOYEES to DEPARTMENTS

Creates DEPARTMENTS table with two columns

Creates EMPLOYEES table with four columns

Inserts 10 rows of random sample data into the DEPARTMENTS table

Which two statements are true about REST Data Sources?

Oracle APEX doesn't provide direct integration of REST Data Sources in interactive reports.

Oracle APEX supports the REST Enabled SQL Query REST Data Source type

REST Data Sources doesn't support any authentication

A REST Data Source can contain one or many Operations, which are the references to a concrete external web service.

DEPARTMENTS and EMPLOYEES tables will have a primary key in each and a foreign key relationship linking EMPLOYEES to DEPARTMENTS

Inserts 10 rows of random sample data into the DEPARTMENTS table

Oracle APEX supports the REST Enabled SQL Query REST Data Source type

A REST Data Source can contain one or many Operations, which are the references to a concrete external web service.

Which statement is true about the Approvals component?

Task Definition is a page that shows details for a specific task, which can include metadata, history, comments, and actions.

Unified Task List is a shared component used to configure task parameters, participants, actions, and due dates.

You can set up task approvers and administrators at design time or determine them dynamically at runtime based on data related to the task.

APEX_APPROVAL is Page processes that create and act on task instances in your pages.

In your application, you want to include a master detail containing two pages based on two related tables or views. The first page contains an interactive report for the master table. The second page features a standard form for the master and interactive grids for the detail. Which master detail form will you create?

Editable Interactive Grid
Side by Side Master Detail
Stacked Master Detail
Drill down Master Detail

Which two statements are true about a Faceted Search page?

Allows to toggle between a bar chart and a pie chart type

You can set up task approvers and administrators at design time or determine them dynamically at runtime based on data related to the task.

Drill down Master Detail

Show search results as cards or a classic report.

Includes a search field at the top of the page with filters that display as suggestion chips.

Includes the ability to rearrange the report interactively using the mouse or keyboard.

You want to create a search configuration in Shared Components. Which search type is supported?

Menu
Navigation
List
Build Options

Allows to toggle between a bar chart and a pie chart type

Show search results as cards or a classic report.
